

# Important information for identification on the premises of Ambrian Energy GmbH

At Ambrian Energy, the following applies: Safety first. This is why we have been happy to comply with the statutory requirements of the ISPS Code (Parts A and B) and SOLAR XI at our site in Bremen since 2004. These regulations oblige us to check and monitor all people entering our premises.

For this reason, access to our premises is only possible with a vehicle-specific magnetic stripe card (ID card) and a corresponding PIN. Everyone must always log in with this ID card and PIN when entering the company premises and log out when leaving. The PIN is also used for identification during automated loading.

To issue the ID card and PIN, we need not only all vehicle data, but also the name, identity card number, employer and valid proof of GGVSE training for the person to whom the PIN is to be issued.

The ID card is issued with brief user instructions, a safety briefing and, if necessary, a briefing on the loading facilities. Persons who are also on the truck must also be registered and will be given a visitor's pass, which is returned at the exit.

Please note that we are obliged to punish any misuse of the ID card or non-compliance with our security regulations. In addition, gross violations of the code of conduct on our premises may result in an immediate end to loading and, in turn, a ban on access to the oil terminal.

Furthermore, we reserve the right to charge a processing fee of € 100.00 should the ID card be lost. If you have any further questions: Feel free to get in touch with us at any time!
